3 AIR QUALITY

3.1 DEPOSITIONAL DUST

All depositional dust sampling locations were in compliance with the rolling annual average limit ($4\text{g}/\text{m}^2/\text{month}$) for the period January 2022 to December 2022. Maximum annual increase in deposited dust levels are also below the criteria limit of $2\text{g}/\text{m}^2/\text{month}$. Depositional dust monitoring results are presented in **Table 1**.

3.2 PM₁₀ AND TSP

The 24-hour maximum PM₁₀ particulate matter concentration less than 10 microns (PM₁₀) criterion of 50µg/m³ was not exceeded during December 2022. The total suspended particulate (TSP) and PM₁₀ annual average results were in compliance with the annual average limit for the period January 2022 to December 2022.

PM₁₀ and TSP monitoring results are presented in **Table 2**.

4 SURFACE WATER QUALITY

A discharge event is deemed to occur when water leaves the site either through the overflow channel of either Dam 3 or Dam 4, or as a result of actively pumping water. A discharge event was not observed At Dam 3 during the site visit on 6 December 2022 therefore, a sample was not required to be collected at Dam 3 (EPA Point 1). A sample was collected from Dam 3 for due diligence purposes only. A discharge event was observed at Dam 4 (EPA Point 4) on 6 December 2022. A discharge sample was collected from Dam 4. Water quality results are presented in **Table 3**.

-- No limit provided in EPL 10341

The pH, total suspended solids (TSS) and oil and grease concentration were compliant with the EPL limits at Dam 4 which was discharging at the time of sampling. Dam 3 was sampled for due diligence purposes only.

5 NOISE LIMITS

Attended noise monitoring is undertaken on a quarterly frequency. Noise monitoring reports are available on the Castlereagh Coal website: www.ccoal.com.au/environmental-reporting-compliance/

6 BLASTING

No blasting was undertaken during December 2022.
